Sable AI Solutions

Applied AI automation for customer-facing teams.

Company profile · Confidential · Head office: Austin, TX · Founded 2021 · 60 employees

About us

Sable AI Solutions is a B2B artificial-intelligence agency that designs, builds, and operates AI automation for mid-market companies. We help revenue and support teams cut manual workload and respond to customers faster by deploying conversational assistants, outbound automation, and retrieval-based knowledge systems on top of our clients' existing tools. We sell outcomes — measurable reductions in response time and cost per conversation — not raw model access. Every engagement pairs a solutions engineer with a customer-success lead, and we operate the systems we build rather than handing over code and walking away.

What we sell — services & capabilities

1. WhatsApp AI Chatbot & Conversational Support Automation

An AI assistant deployed on WhatsApp Business, web chat, and Instagram DMs that answers customer questions, qualifies inquiries, and hands off to a human when needed. Best fit for companies with high inbound message volume. Handles order status, FAQs, bookings, and lead capture in 30+ languages. Typical deflection rate of 55-70% of tier-1 questions.

2. AI Lead Generation & Outbound Automation

An autonomous outbound engine that researches target accounts, drafts personalized emails grounded in each prospect's context, and books meetings. Includes response classification and automated follow-up sequences. Built for sales teams that want more qualified pipeline without adding SDR headcount.

3. RAG Knowledge Assistants

Retrieval-augmented assistants over a client's internal documents (policies, product docs, contracts) or public-facing content. Deployed as internal Slack/Teams copilots or customer-facing help agents. Answers are grounded in the client's own sources with citations — no invented facts.

4. Voice AI & Call Deflection

Inbound and outbound voice agents for appointment reminders, order updates, and first-line support. Integrates with existing telephony (Twilio, Vonage). Reduces call center load during peak periods.

5. Custom LLM Workflow Automation

Bespoke automation for document processing, data extraction, and internal workflows — e.g. invoice parsing, claim triage, and CRM data enrichment. Scoped per engagement.

Target industries & ideal customers

We focus on customer-heavy, mid-market businesses where conversation volume and manual follow-up are real bottlenecks. Strongest fit industries:

- **E-commerce & D2C retail** — high inbound support and order-status volume.
- **Logistics & last-mile delivery** — tracking, exceptions, driver coordination.
- **Real estate & property management** — lead qualification, viewing scheduling.
- **Healthcare clinics & dental groups** — appointment booking and reminders.
- **Financial services & fintech** — onboarding support and document collection.
- **B2B SaaS** — outbound pipeline generation and support deflection.

Ideal customer size is 20 to 500 employees, typically $5M-$150M in revenue, with an existing support or sales team feeling the strain of manual volume. We are usually a poor fit for pre-revenue startups and for enterprises requiring fully on-premise deployment.

Case studies

Meridian Threads (D2C fashion, ~120 staff)

Deployed the WhatsApp AI Chatbot across support and pre-sales. Automated 63% of tier-1 inquiries, cut median first-response time from 5 hours to under 2 minutes, and recovered an estimated $410K in abandoned-cart revenue in the first two quarters.

Cartwright Logistics (regional 3PL, ~300 staff)

Voice AI plus WhatsApp automation for shipment tracking and delivery-exception handling. Reduced inbound call volume 41% and freed 9 full-time agents for higher-value work.

Northlake Dental Group (12-clinic dental group)

RAG knowledge assistant and appointment booking bot. Reduced no-shows 22% via automated reminders and answered 80% of routine patient questions without staff involvement.

Pricing & packages

Package	Monthly	Includes
Starter	$1,500/mo	One channel (WhatsApp or web chat), up to 3,000 conversations/mo, standard integrations, email support. Cloud-only.
Growth	$4,500/mo	Up to 3 channels, 15,000 conversations/mo, CRM + helpdesk integrations, custom RAG knowledge base, dedicated success manager.
Enterprise	Custom	Unlimited channels, custom volume, SSO, data-residency options, SLA-backed uptime, solutions-engineering retainer.

All packages require a minimum 3-month initial term. Setup fee ranges from $2,000 (Starter) to

$15,000+ (Enterprise) depending on integration complexity. Annual prepay receives a 15% discount.

Technologies & integrations

Models: Groq (Llama 3.x), OpenAI GPT-4 class, and Google Gemini, selected per use case. Retrieval built on Chroma and pgvector. We integrate with:

- Messaging: WhatsApp Business API, Instagram, Facebook Messenger, web chat, Twilio SMS.
- CRM: Salesforce, HubSpot, Pipedrive.
- Helpdesk: Zendesk, Intercom, Freshdesk.
- Commerce: Shopify, WooCommerce, Magento.
- Telephony: Twilio Voice, Vonage.
- Calendars: Google Calendar, Microsoft 365.

Business limitations & conditions

- No fully on-premise deployment; Enterprise offers regional data residency only.
- Starter tier excludes custom integrations and PHI/regulated-data workloads.
- Healthcare deployments require the Growth tier or above (BAA available on Enterprise).
- Minimum contract term is 3 months; conversations beyond plan limits are billed per 1,000.
- We do not sell standalone model API access or one-off prompt engineering.
- Supported languages: 30+ for chat, 12 for voice.
